
CLIENT USER GUIDE

OSK

A simple, step-by-step guide to every page,
option and feature in your real-estate platform.

No technical experience needed. Read it cover-to-cover
or skip to the section you need.

Version 1.0 · For private review

What's in this guide

OSK has three sides: the **public website** anyone can browse, the **seller dashboard** for people who post listings, and the **admin console** you control. This guide walks you through all three.

1. What OSK is, in one minute	A plain-English overview
2. Getting started	Sign up, sign in, verify your email
3. Browsing the website	Home, search, property pages
4. Saving favourites & contacting owners	Save, chat, call, WhatsApp, email
5. Your account	Profile, avatar, password, sessions
6. Selling a property	Create, edit, submit a listing
7. Inquiries & messages	Replying to interested buyers
8. Seller analytics	Views, inquiries, conversion
9. Admin: site settings	Theme, logo, contact details
10. Admin: moderation queue	Approve or reject new listings
11. Admin: users	Roles, blocking, impersonation
12. Admin: featured listings	Promote properties on the home page
13. Admin: reviews	Remove abusive or off-topic reviews
14. Admin: inquiries & audit log	See every lead and every admin action
15. When buyer and seller agree	How status changes and what handoff looks like
16. Common questions	FAQ + troubleshooting
17. Glossary	Plain-English definitions

What OSK is, in one minute

OSK is a premium real-estate platform. Buyers browse homes, plots, commercial space and rentals; sellers post their listings; you, as the admin, oversee everything.

There are five kinds of inventory:

- **Homes** — houses and apartments for sale.
- **Rentals** — properties offered for monthly rent.
- **Plots & Land** — undeveloped parcels.
- **Commercial** — offices, retail, warehouses.
- **New Projects** — brand-new construction from developers.

Four ways a buyer can reach an owner:

- **In-app chat** — a live conversation inside OSK, with notifications.
- **Call** — click to ring the owner, or request a callback at a chosen time.
- **WhatsApp** — opens WhatsApp with the listing details prefilled.
- **Email** — sends a private inquiry; the owner gets it, the buyer keeps their address private.

Three sides of OSK

Public site — anyone can browse, no account needed.

Seller dashboard — for people who post listings and reply to inquiries.

Admin console — your control panel for the entire platform.

Getting started

Creating an account

On the home page, click **Sign Up** in the top-right. Fill in your name, email, a strong password, and pick the kind of account you want:

- **Buyer** — you only want to browse, save and contact owners.
- **Seller** — you want to post your own properties.
- **Agent** — you list on behalf of clients and appear in the agent directory.

OSK sends a confirmation email. Click the link inside to verify your address. If it doesn't arrive, open your **Profile** in the dashboard and click **Resend link**.

Signing in

Click **Sign In**, enter your email and password. Forgot it? Click **Forgot password** — OSK emails you a reset link that's valid for one hour.

Tip · Passwords

Passwords need at least 8 characters, one uppercase letter and one number. When you change your password from your profile, every other device you were signed in on gets signed out automatically.

Browsing the website

The home page

The hero search bar lets buyers find listings in seconds. Four tabs across the top set the buyer's intent:

Buy	Resale homes, plots and commercial space for purchase.
------------	--

Rent	Monthly rental properties.
-------------	----------------------------

New Projects	Brand-new construction from developers.
---------------------	---

Sold	Recently closed sales (lookup, not for purchase).
-------------	---

Below the tabs are five filters. They all work together — set any combination, then press **Search**:

City	Pick a US city from a searchable dropdown.
-------------	--

Location	Optional ZIP, neighborhood, or street.
-----------------	--

Property type	Pick a category (homes, plots, commercial, rentals) and any sub-types.
----------------------	--

Price	Slide a range, or type exact min/max in dollars.
--------------	--

Size	Same idea but for square feet.
-------------	--------------------------------

Browsing results

Listings appear as a grid of cards. Each card shows the photo, price, beds/baths/area, and four buttons for the four contact channels. A buyer can switch to **Map view** any time to see listings pinned on a real map.

The property page

Every listing has a dedicated page with:

- A full-width photo gallery (click any picture to open the lightbox).
- Headline price, beds/baths/area, and a "verified" ribbon.
- Description, amenities and key facts.
- A map showing the property's exact location and the neighborhood.
- Reviews from previous buyers.
- A sticky "Contact the owner" card on the right with all four channels.

Saving favourites & contacting owners

Saving listings

Click the heart icon on any card or property page to save it. Saved listings live at **/saved**, accessible from the header. They're stored on the buyer's own device — no account needed.

The four contact channels

On every property, the owner can decide which channels are open. By default, all four are enabled. Here's what each one does:

Chat	Opens a live in-app conversation. The owner gets a notification. Messages keep coming through both polling and a live socket connection, so a reply shows instantly.
Call	Logs a "call intent" for analytics, then offers two options: dial the owner directly, or request a callback at a time slot the buyer picks.
WhatsApp	Opens WhatsApp with a templated message that already includes the listing title and link.
Email	Opens a private inquiry form. The buyer fills name + email + message; the owner gets the message in their dashboard, the buyer's email stays private.

You can't message yourself

If a seller views their own listing, the four contact buttons are hidden and a small note explains why. Buyer messages and inquiries land in the seller's dashboard.

Your account

Profile

Open **Dashboard** → **Profile**. You can:

- Change your display name.
- Upload an avatar (drag the file in, or click to browse).
- Remove your avatar at any time.

Change password

Below the profile form there's a "Change password" section. Enter your current password, then a new one twice. Saving signs out every other device — this tab stays signed in.

Email verification

If your email isn't verified yet, a yellow banner appears at the top of the profile page. Click **Resend link** to get a new confirmation email.

Selling a property

The seller dashboard

Once you sign up as a seller (or agent), **Dashboard** appears in the header dropdown. The sidebar gives you these pages:

Overview	A snapshot — pending listings, recent inquiries, unread messages.
My listings	Every property you own, with status pills (Draft / Pending / Published / Sold).
Inquiries	Email + callback leads coming from your listings.
Messages	In-app chat threads with buyers.
Analytics	Views and inquiries per listing.
Profile	Your name, avatar, password, email verification.

Posting a listing

1. Click **+ New listing** in the sidebar.
2. Pick a property type (Home, Plot, Commercial or Rental). The form adapts — a plot doesn't ask for bedrooms; a rental shows a "monthly rent" label.
3. Fill in title, description, price, location, amenities and any other type-specific fields.
4. Drop in photos and (optionally) a short video. The first image becomes the thumbnail.
5. Click **Save draft** — your listing is saved but not public.
6. When you're ready, click **Submit for review**. The admin sees it in the moderation queue.
7. Once approved, the listing goes live and starts collecting views and inquiries.

Listing lifecycle

Draft → only you can see it.

Pending Review → submitted to the admin.

Published → live on the site.

Rejected → sent back to you with a chance to edit and resubmit.

Sold → archived once a sale closes.

Editing or removing a listing

In **My listings**, click **Edit** on any row. Save changes and they appear immediately if the listing was already published, or stay as a draft if it wasn't.

Inquiries & messages

The inquiries page

Every email inquiry and callback request from buyers shows up in **Dashboard** → **Inquiries**. Each row carries the buyer's name and email, the listing it's about, the channel (email or callback), and a status pill. You can change status to:

- **New** — just arrived, you haven't replied yet.
- **Contacted** — you've reached out.
- **Callback Requested** — the buyer wants you to call them at a specific time.
- **Closed** — the conversation is finished.

Use the filter pills above the list to narrow by channel or status.

Messages (live chat)

Open **Dashboard** → **Messages** to see every chat thread. The left column lists conversations; the right column is the active conversation.

The top of every conversation now shows:

- **The other person's name** and their role (Buyer / Listing owner).
- **Their email address**, so you know who's talking to you.
- **The listing** the thread is about — click it to open the property page in a new tab.

You can type a message, attach images or video, and press **Send**. New messages arrive instantly through a live socket connection; even if that connection drops, the screen still refreshes every 30 seconds.

Seller analytics

Open **Dashboard** → **Analytics** to see how your listings are performing. At the top there's a strip of four totals:

Total views	Every unique tab × listing view across your inventory.
--------------------	--

Total inquiries	Every email + callback lead from every channel.
------------------------	---

Active listings	How many properties you have in any status.
------------------------	---

Saved on this device	Properties you've bookmarked yourself.
-----------------------------	--

Below the totals, a per-listing table shows the same numbers split by property, plus a **Conversion** column — the percentage of viewers who sent an inquiry. A high view count with low conversion usually means the price needs a second look, or the photos need work.

How views are counted

A view counts once per tab × listing × browser session. Refreshing the page or hitting back/forward doesn't double-count. Closing the tab and re-opening tomorrow does — that's a new visit.

Admin: site settings

When you're signed in as an admin, you see an extra **Admin** link in the header. Click it to open the admin console — a separate, sidebar-driven workspace.

The first page worth knowing is **Settings**. Everything on this page is global — it changes how the site looks and reads for every visitor.

Theme

Four built-in themes, each with its own colour palette and feel. Click a card to preview it; save to apply it site-wide.

Luxe Light	Editorial — the default, warm-white background with deep slate accents.
Luxe Dark	Cinematic — low-light, ideal for hero imagery.
Emerald	Botanical — forest tones, calm and trustworthy.
Sandstone	Warm — desert palette, very tactile.

Brand

- **Company name** — appears in the footer, the header brand mark when no logo is uploaded, and in every transactional email.
- **Logo** — upload a PNG, WEBP or transparent file. As soon as it's saved, the header and footer switch from the text mark to your logo.

Contact

Two phone fields and a full address grid:

- **Email** — the public address shown in the footer and on /contact.
- **Phone (display)** — what humans see, e.g. +1 (365) 955-7829.
- **Phone (tel: link)** — digits and a leading + only, used by the click-to-call links.
- **Address** — line 1, city, region, postal code, country. Surfaces in the footer, the contact page, and the footer of every system email.

Why a separate "tel:" phone field?

The display version reads nicely for humans. The "tel:" version is the one a phone or browser uses to actually place the call — it can't have spaces, parentheses or dashes.

Admin: moderation queue

Sellers post listings as drafts and then submit them for review. Every submission lands in **Admin** → **Moderation**.

One at a time

Each row shows the listing's thumbnail, title, location and price. Click the title to open it in a new tab and inspect it before deciding. Then:

- **Approve** — the listing goes live immediately.
- **Reject** — the listing goes back to the seller. They can edit and resubmit.

Bulk approve / reject

When the queue is long, use the checkboxes:

1. Tick the checkbox on each row you want to act on (or use the master checkbox in the toolbar to select the whole page).
2. A floating action bar appears at the top with **Approve selected** and **Reject selected**.
3. Confirm the prompt — OSK processes the listings one by one and gives you a single summary toast ("3 approved, 1 failed").

Audit trail

Every approval and rejection is recorded in the audit log with your name, the listing title, and the timestamp. You can review every action you've ever taken under Admin → Audit log.

Admin: users

Open **Admin** → **Users** to see everyone who's signed up. Search by name or email; the count on the right always reflects the filter.

Per-row controls

Role	A dropdown — switch a buyer to seller, promote a seller to agent, etc. Admin can be granted manually too.
Impersonate	Sign in as that user. Your admin session is preserved, and a yellow banner appears across the site so you always know you're impersonating. Click "Stop impersonating" to return to your admin session.
Block / Unblock	A blocked account can't sign in or message anyone, but the history stays intact for audits. Click Unblock to restore access.

You can't change your own role, block yourself, or impersonate yourself — OSK disables those controls on your own row so a bad click doesn't lock you out.

Use impersonation sparingly

Impersonation is recorded in the audit log with both your id and the target user's id. It's a powerful support tool — only switch into someone's account when they've asked you to help them, or you're investigating a problem.

Admin: featured listings

Featured listings show up first on the home page and in search. Open **Admin** → **Featured** to pick what gets featured.

Two tabs at the top:

- **All published** — every live listing, even unfeatured ones.
- **Currently featured** — just the ones already promoted.

Each row has a real on/off switch. Flip it to promote or demote — the site updates immediately. There's no hard cap, but keep the set tight: "featured" only means something if it's scarce.

Admin: reviews

Buyers can leave a star rating + a short review on any property. They publish immediately — they're not pre-moderated. Open **Admin** → **Reviews** to scan recent ones and remove anything that's spam, harassment, or names a private individual.

Each review card shows the rating, the body, the author's name and email, and a deep link to the listing. Click **Remove** to delete it — you'll be asked to confirm. The action is audit-logged.

Reviews policy

Reviews exist to help buyers. Remove a review only when it would mislead or harm someone, not just because it's critical of a seller. If in doubt, leave it.

Admin: inquiries & audit log

Global inquiries

Open **Admin** → **Inquiries** to see every lead across the whole platform — not just yours. Same filters as the seller dashboard (channel, status), same per-row controls. The header just says "Platform inquiries" so you remember the scope is global.

Audit log

Open **Admin** → **Audit log** to see a timeline of every privileged action — yours and any other admin's. Each entry shows:

- Who did it (name + email).
- What they did — "changed role", "approved listing", "featured listing", "rejected listing", "removed review", "changed settings", "impersonated user".
- A meta diff where useful — e.g. "buyer → agent", or the listing title.
- When it happened (a human-readable relative time).
- The IP it came from.

Entries auto-expire after 365 days. That's long enough for any compliance review, short enough that the log doesn't balloon.

When buyer and seller agree

OSK is a **listing & messaging platform** — it brings buyers and sellers together but it does not move money, sign contracts, or transfer titles. Those steps happen off-platform, the same way any real-estate deal closes. What OSK handles is the **listing status** — the public signal of where a property is in its lifecycle.

The five statuses

Draft	The seller is still writing the listing. Only they can see it.
Pending review	Submitted to the admin. Hidden from buyers until approved.
Published	Live on the site, accepting inquiries and chats.
Rejected	Sent back by the admin. The seller can edit and resubmit.
Sold	The deal closed. The listing is archived but still browsable as historical record.

The agreement flow, step by step

1. **Buyer finds the property** on the site and uses one of the four contact channels — chat, call, WhatsApp, or email — to reach the owner.
2. **They negotiate inside OSK** using the live chat (in Dashboard → Messages). The whole conversation, including any photos or documents shared, is preserved.
3. **They agree on terms** — purchase price, closing date, contingencies — entirely inside the chat or by email/phone.
4. **The real-world paperwork happens off-platform.** Lawyers, notaries, title companies, mortgage providers, escrow services — whatever the local jurisdiction requires. OSK does not touch this step.
5. **Once the deal closes**, the seller opens **Dashboard** → **My listings** → **Edit**, changes the status to **Sold**, and saves.
6. **The listing is now archived.** It still shows up in the seller's history, can be reviewed by past buyers, and counts in admin analytics. It no longer appears in public search.

For rentals — exactly the same pattern

Buyer and seller agree in chat. The lease itself is signed off-platform. The seller then marks the listing as Sold (rented) so it stops appearing in active search. If the property comes back on the market later, the seller can simply create a fresh listing.

Who can change a listing's status?

Seller	Can move their own listing through Draft → Pending → Sold, and edit the description, price, photos etc. at any time.
Admin (you)	Approves or Rejects from Pending → Published / Rejected. Can also flip Featured on or off, and can step in to edit or mark Sold on a seller's behalf if asked.
Buyer	Has no power to change status — only to send messages and inquiries.

What OSK does NOT do (today)

Because real-estate deals carry legal weight, OSK deliberately stops at the conversation. The following are **not** built in — they'd be separate paid integrations if you ever wanted them:

- **Escrow / deposit collection** — no payment rail. Buyers and sellers settle outside OSK.
- **Contract generation or e-signature** — no built-in document workflow. Use a service like DocuSign or HelloSign for that.
- **Automatic ownership transfer** — the listing's *OSK owner* stays the seller's account even after a sale; OSK's "owner" is just the person who posted the listing, not a legal title holder.
- **Buyer attribution** — once a sale closes, OSK doesn't record which buyer bought it. If you need that, the seller can note it in the listing description or the chat thread.

Want a richer transaction flow later?

A future release could add a "Mark as agreed" button inside a chat thread that locks the listing, lets both parties tick "ready to close", and freezes the inquiry funnel. If your business needs this, it's a logical next step — but not in the current scope.

Common questions

I changed the theme but the site still looks the same.

Reload the page. Theme changes apply on the next request — your old tab keeps the old theme until it refreshes.

A seller says they can't see contact buttons on their own listing.

That's by design. You don't email or chat with yourself. Direct them to Dashboard → Messages where buyer messages land.

Someone reset their password but didn't get the email.

OSK still ships with a "console" email adapter by default — emails are logged but not sent. Switch to SMTP in the backend env vars (see the deployment guide) and try again.

How do I become an admin if I just signed up?

You can't self-register as admin. Sign up as any role, then have another admin promote you under Admin → Users → Role dropdown.

A buyer reports a listing is offensive.

Open the property page, copy its URL, then go to Admin → Moderation. If it was already approved, you can find it in Admin → Featured (All published tab) and decide whether to remove it from the platform via the seller's dashboard or contact the seller directly.

Can I export the inquiries list?

Not in the current release. The data is available via the API; export is on the roadmap.

How fast do messages arrive?

Real-time when both people are online — a live socket connection pushes messages instantly. If that connection drops, the screen still refreshes every 30 seconds as a fallback.

A listing is published but isn't showing up in search.

Check the moderation status under Admin → Moderation. A listing must be in the Published state to appear publicly. If it's Pending or Rejected, it won't show.

Glossary

Plain-English definitions for the vocabulary you'll see.

Listing	A single property posted for sale or rent.
Property type	Home, Plot/Land, Commercial, or Rental.
Listing kind	Resale (existing property) or New Project (developer's new build).
Draft	A listing the seller is still writing — only they can see it.
Pending review	A listing the seller has submitted, waiting for an admin to approve or reject.
Published	A listing that's live on the site and visible to buyers.
Featured	A published listing the admin has promoted to appear first on the home page.
Inquiry	A message from a buyer about a listing — by email, callback request, or chat.
Thread	A chat conversation between a buyer and a seller about a single listing.
Buyer	Someone who only browses and contacts owners.
Seller	Someone who posts their own listings.
Agent	A professional who lists on behalf of clients. Appears in the public agent directory.
Admin	You. Has access to the admin console and every moderation control.
Impersonation	An admin temporarily signs in as another user to help them. The admin's session is preserved and the action is logged.
Audit log	A record of every privileged action — who did what, when, from which IP.
Saved listings	Properties a buyer has bookmarked on their device. No account needed.
Verified email	A buyer or seller has clicked the link OSK sent to confirm their address.

That's OSK.

Every page in the app maps to a section in this guide.
Keep it handy as you start working with real listings — and reach out
whenever a question comes up.
